DATA-DRIVEN OILFIELD SOLUTIONS
IN THE OIL PATCH, THERE’S AN OLD SAYING: YOU HAVE TO MEASURE IT, TO MANAGE IT. WE TAKE IT MUCH FURTHER.

We measure it while we manage it.

At ReStream, we provide clients with unparalleled, turn-key data collection, visualization, analysis, and optimization services that are customized to achieve their goals.
DO YOU WANT TO KNOW?
ReStream understands the oilfield. We recognize the unique operational, personnel, fluid chemistry/rheology, equipment, and environmental conditions that must be balanced to enhance the profitability of both assets and processes. We build robust, fit-for-purpose, field-level hardware to collect numerous specifically targeted datasets that allow us to accurately characterize those conditions relative to system-wide performance. We then collaborate closely with our clients, and their service providers, to pinpoint the root cause of problems by leveraging our ever-evolving, proprietary set of algorithms contained within our real-time, cloud-based software platform. Once those problems are identified, we design a verifiable optimization strategy to effectively manage and mitigate them for maximum efficiency and economic performance.

THE RESULTS
ReStream delivers previously unattainable field-level optimization by proactively identifying, mitigating; and, in some cases, totally eliminating costly problems that impede optimal performance. ReStream clients enjoy reduced costs, decreased workloads and definitively proven, data-driven solutions that allow them to outperform their competition.

THE PROCESS
Collect Accurate Data → Identify Problems → Collaboratively Deploy Verifiable Optimization Strategies → Maximize Client Profitability
RESTREAM’S APPROACH

Our systematic approach is a multi-disciplinary data collection and analysis technique that explores the interdependent nature of numerous data-sets in pursuit of enhanced oilfield performance.

THE BENEFITS

• Providing our clients with previously unattainable visibility into their field-level operations
• Allowing customers to monetize data-sets by demonstrating cost savings, efficiency gains, and competitive advantages
• Collaborating with our clients to design actionable, scalable, and data-supported “Best Practices” recommendations
• Empowering field-level decision makers with accurate, real-time data in a user-friendly format
• Eliminating redundant or inefficient processes to continuously improve operational efficiency
• Optimizing chemistry applications and management practices in real-time
• Leveraging new technologies and automation to save time and money
• Preemptively avoiding numerous, costly, and recurring problems
• Validating or disproving both legacy and new approaches to resolving issues
